

# Scout Badge Shop Plugin

I wanted to “sell” badges – both internally to our team leaders and excess stock to other users.

David Breakwell has created a [useful tool](#) to quickly upload badges and get them working with a WooCommerce plugin for your website.

This got the products in and I was able to add in the stock we have. I also created some custom items, like our local district and county badges. I also connected Stripe to accept payments, using a plugin rather than WooPayments since we already have an account.

This was working well, but a pain to have to search and add badge by badge to an order. I also wanted my internal team to pay by invoice. It was also a pain to add deliveries I received from the Scout shop. So I created the ScoutBadgeShop plugin and have made it available here.

- V2 – bundled for distribution. Features include:
  - A new user type “wholesale customer” is created. Change users to this type to allow them to back order badges and to pay by invoice
  - A cost price and location field is added to each item. Currently for future functionality for reporting (and finding the stock).
  - A shortcode “[scoutbadgeshop\_products]” has been added, which can have a categories attribute to display a shopping grid where a user can add multiple badges easily (they can only order up to the stock level displayed, unless a wholesale customer).
  - In the WP Admin area, a Stock Deliveries area allows a user to easily add deliveries with a reference.
  - A stock reports option has been created with a few reports at this time.

Feedback is welcome!
